MOHAMED FAWZY

Flutter Developer | +201068808559 | Tanta, EG (Relocation) | mohamedfawzydev27@gmail.com | github.com/M-Fawzy2004 | linkedin.com/in/mohamed-fawzy-02388729b | mofawzy-portfolio.vercel.app

Summary

Mobile Software Engineer specializing in Flutter & Dart, with a proven track record of architecting and publishing production-ready applications on the App Store and Google Play. Skilled in implementing Clean Architecture, reactive state management (BLoC), and secure backend workflows using Supabase and Firebase. Experienced in integrating RESTful APIs, offline-first systems, and performance optimization to deliver reliable, scalable mobile products.

Skills

- **Domain Skills**: Mobile App Development, Real-Time Architecture, Payment Systems, State Management, Responsive UI/UX, Performance Optimization
- **Technical Skills**: Dart, Flutter, BLoC/Cubit, Clean Architecture, SOLID Principles, MVVM, Dependency Injection (GetIt), REST APIs, Dio, Supabase, Firebase, Google Maps API, Push Notifications, Localization (RTL), Git/GitHub, App Store Connect, Play Console, CI/CD Basics, In-App Purchases, Offline-First Architecture
- **Soft Skills**: Problem Solving, Cross-Functional Communication, Teamwork, Adaptability

Work Experience

DocMate (Freelance) August 2026 - October 2026
Flutter Developer *Remote*

- Architected and published DocMate on Google Play & App Store using Flutter, Clean Architecture, and BLoC for seamless patient-doctor workflows.
- Engineered a real-time smart queue and appointment booking system utilizing Supabase RPCs, dynamic scheduling, and push notifications.
- Built a React admin dashboard to streamline doctor verification workflows, payment approvals, and enforce strict Supabase RLS policies.
- Implemented offline caching, multi-language localization, and centralized error handling to ensure rock-solid data integrity and smooth UX.

Trade Box (Freelance) January 2026 - March 2026
Flutter Developer *Remote*

- Engineered secure auth flows across 10+ screens using Dio and REST APIs, integrating OTP verification, session management, and error handling.
- Improved UI responsiveness and performance by scoping BLoC streams, implementing API caching, and eliminating redundant widget rebuilds.

Academia AI October 2025 - Present
Founder & Flutter Engineer *Remote*

- Architected and published Academia AI on Google Play across 25+ screens using Flutter, Clean Architecture, BLoC, and Supabase.
- Engineered a multi-LLM engine integrating DeepSeek, LLaMA, Groq, and Gemini, featuring automated failover and response caching.
- Built AI-driven features including audio lecture recording, OCR extraction, automated quiz generation, and a GPA calculator.
- Implemented monetization and subscription workflows using RevenueCat, Google Play Billing, and Supabase usage quota validation.

Education

Faculty of Computers and Information Tanta, EG
Bachelor of Information Systems - GPA: (3.3/4.0) *October 2022 - July 2026*

Projects

ParkMate
Engineered a smart parking assistant app using Flutter, Clean Architecture, BLoC/Cubit, and Supabase Auth. Integrated Mapbox APIs to deliver real-time route tracking, dynamic reverse geocoding, ETA estimation, and parking spot management. Implemented proactive offline detection, full Arabic/English localization (RTL support), and persistent parking history.

E-Commerce Platform
Built an end-to-end e-commerce ecosystem comprising a cross-platform Flutter customer app and an administrative manage ment dashboard. Integrated Paymob payment gateway and OpenStreetMap alongside API response caching, pagination, and lazy loading to maximize performance. Engineered complete commerce flows including cart management, order tracking, and GoRouter-based deep navigation.
