SUMMARY

Mobile Software Engineer specializing in Flutter & Dart, with two production-ready apps published on Google Play and the App Store. Experienced in Clean Architecture, BLoC/Cubit, and backend workflows using Supabase and Firebase, with hands-on work in RESTful APIs, offline-first design, Arabic/English (RTL) localization, and payments and subscriptions.

EXPERIENCE

Flutter Developer, DocMate (Freelance, Remote)

Patient-doctor booking app for the Egyptian market, live on Google Play & App Store — Aug 2026 – Oct 2026

- Built a real-time smart queue and appointment booking system using Supabase RPCs and push notifications, supporting patient, doctor, and admin roles.
- Developed a React admin dashboard for doctor verification and payment approvals, secured with Supabase RLS policies.
- Implemented offline caching and Arabic/English localization.

Flutter Engineer, Academia AI (Personal Project)

AI study app on Google Play (100+ downloads, 5.0★ rating) — Oct 2025 – Present

- Built a 25+ screen app with a multi-LLM engine (4 providers: DeepSeek, LLaMA, Groq, Gemini) featuring automated failover and response caching.
- Developed audio lecture recording, OCR, and quiz generation, with subscriptions via RevenueCat and Google Play Billing.

Flutter Developer, Trade Box (Freelance, Remote)

Client mobile app, authentication and performance work — Jan 2026 – Mar 2026

- Built secure auth flows (OTP, session management) across 10+ screens using Dio and REST APIs.
- Improved UI performance by scoping BLoC streams, adding API caching, and removing unnecessary rebuilds.

EDUCATION

Bachelor of Information Systems, Faculty of Computers and Information

Tanta University, EG | GPA: 3.3/4.0 — Oct 2022 – Jul 2026

Graduation Project: KidDrive, graded Excellent. A child transportation app (Parent app and Driver dashboard) with real-time bus tracking, built in a 9-person team (4 Flutter developers) using Flutter.

TECHNICAL SKILLS

- Languages: Dart
- Mobile: Flutter, BLoC/Cubit, GoRouter, GetIt, Dio, Push Notifications, Offline-First Caching, Arabic/English (RTL).
- Architecture: Clean Architecture, MVVM, SOLID.
- Backend & Cloud: Supabase (PostgreSQL, Auth, RPCs, RLS), Firebase, REST APIs
- Integrations: Google Maps, Mapbox, Paymob, RevenueCat, Google Play Billing.
- Tools: Git/GitHub, Play Console, App Store Connect

PROJECTS

ParkMate: Smart Parking Assistant | Flutter, BLoC/Cubit, Clean Architecture, Supabase, Mapbox

Built real-time route tracking, ETA estimation, and parking management; implemented offline detection, bilingual RTL localization, and persistent parking history.

E-Commerce Platform: Customer App & Admin Dashboard | Flutter, GoRouter, Paymob, OpenStreetMap

Developed cart, order tracking, and navigation flows; integrated Paymob payments and optimized API performance using caching, pagination, and lazy loading.

LANGUAGES

Arabic (Native) | English (Intermediate)
